

KNOX TALL FESCUE

Knox Tall Fescue delivers professional-grade turf quality with minimal maintenance. Knox is a turf-type variety selected for deep color and refined texture. It pairs 88% endophyte content with strong drought tolerance and wear resistance to produce a resilient, reliable stand under demanding conditions. Validated through years of field testing in North Carolina and Oregon, it provides dependable results across diverse climates, whether for home lawns or commercial installations.

BENEFITS:

- Strong Drought Tolerance - Maintains green cover under stress with strong recovery in drought conditions
- Traffic & Wear Resistant - Suited to high-traffic areas
- Strong Disease Resistance - Good tolerance to stem rust and brown patch, lowering maintenance needs
- Attractive, Dense Turf – Deep color and fine texture for a lush lawn
- Versatile Adaptation - Thrives in humid and cooler regions

RECOMMENDED SEEDING RATES

New Establishment: 8-10 lbs per 1,000 sq ft

Overseeding: 4-5 lbs per 1,000 sq ft

Germination: 7-14 days under optimal conditions
(cool temperatures, adequate moisture)

*For best results, seed in well-prepared soil with moderate fertilization (3-5 lb N/1000ft²/year). Irrigate to prevent stress and apply fungicides as needed in disease-prone areas. Consult local agronomists for site-specific recommendations.
